

Media Upload

Overview

Media upload integration for avatars and message attachments. Handles file validation, upload to CDN, and URL return.

Direction

Outbound — messenger uploads files to CDN service, receives URLs.

Protocol

- HTTPS / REST API
- Multipart/form-data for file upload
- JSON response with CDN URL

Supported Formats

Format	Max Size	Usage
JPG	5MB	Avatars, images
PNG	5MB	Avatars, images
GIF	5MB	Animated avatars
PDF	10MB	Document attachments

Data Flow

```
User selects file → Client validation (size, type)
                        ↓
                POST /api/media/upload
                        ↓
        CDN service processes file
                        ↓
        Returns CDN URL
                        ↓
        URL stored in database
```

Failure Handling

Failure	Response	Recovery
File too large	"File too large" error	Ask user to compress

Failure	Response	Recovery
Invalid format	"Unsupported format" error	Ask user to convert
Upload failed	"Upload failed" with retry	Allow retry
