

Push Notification

Overview

Workflow for receiving and handling push notifications when user is offline or app is in background.

Preconditions

#	Condition	Notes
1	User enabled notifications	Setting in profile
2	Browser permission granted	Browser notification API
3	User offline or app background	Push only relevant when not active

Step-by-Step Flow

Step	Action	Component
1	System sends push	Firebase Cloud Messaging
2	User sees notification	Browser notification
3	User taps notification	Click handler
4	App opens relevant chat	Navigate to chat screen
5	Notification marked as read	POST /api/notifications/{id}/read

Outputs

- User notified of new message
- User redirected to relevant chat

Exceptions

Exception	Handling
Permission denied	Show in-app prompt to enable
Chat not found	Show error, return to notifications

Related Screens

- **chat** — destination when tapping notification
- **notifications** — notification list
