

Login Screen

Purpose

User authentication screen — the entry point to the messenger application.

Handles both local authentication (email/password) and Yandex OAuth.

UI Elements

Element	Type	Required	Notes
Email field	input[type=email]	Yes	Validates format
Password field	input[type=password]	Yes	Masked, min 8 chars
Login button	button[type=submit]	Yes	Primary action
Forgot password link	a[href]	No	Secondary
Register link	a[href]	No	Secondary
Yandex OAuth button	button	No	Third-party auth
Error message	div.alert	Conditional	Red background

Actions

1. Submit login form

- Validates email format and password length
- Sends POST to `/api/auth/login`
- On success: redirects to chat screen
- On failure: shows error message

2. Navigate to register

- Clicking "Register" navigates to register screen
- Uses Next.js `<Link>` component

3. Forgot password

- Sends password reset email via auth-service
- Shows confirmation message

4. Yandex OAuth

- Redirects to Yandex OAuth flow
- Callback handled by `/api/auth/yandex/callback`

Related Transitions

- [login-to-chat](#) — successful authentication
- [login-to-register](#) — user clicks register link

Related Scenarios

- [user-login-flow](#) — complete authentication workflow
