

# Settings to Login

---

## Overview

Transition from settings screen to login screen via logout action.

## Trigger

User clicks "Logout" button in settings.

## Conditions

- User must be authenticated
- Logout should be confirmed (optional, depends on security policy)

## Result

- Session cookie deleted
- User profile cleared from localStorage
- Redirect to `/login`
- Login screen displayed

## Failure Modes

| Failure       | Response                    | User Action |
|---------------|-----------------------------|-------------|
| Logout failed | Error toast "Logout failed" | Retry       |

## Related Scenarios
