

# Migration Repo Map v2

---

## Current State (Donor Repository)

This document maps the current repository structure to the target monorepo architecture.

---

### Applications Mapping

| Current Path     | Future Path                        | Status                        | Notes                                                      |
|------------------|------------------------------------|-------------------------------|------------------------------------------------------------|
| messenger/       | apps/web-main                      | keep-as-is /<br>migrate later | Main web app (messenger), contains i18n, theme-store, Logo |
| admin-portal/    | apps/admin                         | keep-as-is /<br>migrate later | Admin portal v3, uses @app-balloo/settings                 |
| api/             | apps/api                           | keep-as-is /<br>migrate later | Backend API server                                         |
| android-service/ | apps/android-service               | keep-as-is /<br>migrate later | Android push service                                       |
| desktop/         | apps/desktop                       | keep-as-is /<br>migrate later | Desktop application (Electron)                             |
| mobile/          | apps/mobile                        | keep-as-is /<br>migrate later | Mobile application (React Native)                          |
| max-server/      | apps/max-server                    | keep-as-is /<br>migrate later | SMS/MMS service                                            |
| docs/            | docs-content/ +<br>apps/docs-site/ | split required                | Docs split between content and site                        |

---

### Packages Mapping

| Current Path | Future Path          | Status                          | Notes                                      |
|--------------|----------------------|---------------------------------|--------------------------------------------|
| shared/      | packages/core-types  | package extraction<br>candidate | Shared types, candidate for core-types     |
| settings/    | packages/core-config | package extraction<br>candidate | Shared settings, candidate for core-config |

---

### Infrastructure Mapping

| Current Path       | Future Path   | Status     | Notes                |
|--------------------|---------------|------------|----------------------|
| nginx/             | infra/nginx   | infra-only | Nginx configuration  |
| docker-compose.yml | infra/docker/ | infra-only | Docker configuration |

## Legacy Items to Address

### Shared Packages (Preserved in Current Location)

- `shared/` remains in place until Phase 3
- `settings/` remains in place until Phase 4

### Applications (No Physical Move in This Ticket)

- All applications stay in current locations until Phase 10-11
- No imports changed in this phase

### Root Configuration

- Current `package.json` (balloo-monorepo) remains unchanged
- `pnpm-workspace.yaml` created in Phase 2 (bootstrap-only)

## Legacy Design Issues

### Rounded Corners (Critical)

**Status:** Legacy usage exists throughout donor repository

**Finding:** The current donor repository contains extensive rounded corner usage in:

- Inline `borderRadius` styles in JSX/TSX
- Tailwind `rounded-*` classes (`rounded-lg`, `rounded-full`, `rounded-xl`, etc.)
- CSS `border-radius` properties (50%, 0.5rem, 0.75rem, 1rem, 2rem, etc.)

**Contract Violation:** All rounded corners must be eliminated as per DesignContract.md:

- `border-radius: 0` is mandatory across all platform UI
- Any `rounded*` utility classes are forbidden
- Legacy rounded usage in donor is a known migration defect

**Action Required:** See `workdocs/legacy-audit/ROUNDING_VIOLATIONS.md` for complete audit.

## Transition Notes

1. **No imports changed** - Existing imports in messenger, admin-portal, api remain untouched
2. **No physical moves** - Applications stay in current locations until Phase 10-11
3. **No build changes** - Existing scripts and builds are preserved

4. **Scaffold only** - This phase creates the target structure without breaking current functionality
  5. **Workspace bootstrap** - pnpm-workspace.yaml created but does not force migration
- 

## Next Steps

See [MIGRATION\\_ROADMAP.md](#) for detailed phase breakdown.
