

NODE SECURITY CONTRACT

Версия: 1.0.0

Дата: 2026-06-13

ЦЕЛЬ

Определить правила безопасности для узлов экосистемы.

ACCESS CONTROL

Admin Services Access

- MUST require authentication
- MUST use 2FA for admin access
- MUST log all admin actions
- MUST NOT be publicly exposed without protection

Operator Devices vs Execution Nodes

- Operator devices (laptop, phones) NEVER store production secrets unencrypted
 - Execution nodes receive secrets via secure channel only
 - SSH keys rotated every 90 days
-

2FA / AUTH CONFIRMATION

Phone Roles:

- **phone_personal**: User 2FA, notifications
- **phone_service**: Admin 2FA, isolated access
- **phone_recovery_optional**: Emergency recovery codes

Requirements:

- ALL admin actions require 2FA confirmation
 - ALL production deployments require 2FA
 - Recovery codes stored encrypted on home_nas
-

SECRETS HANDLING

Assumptions:

- Secrets stored in encrypted form on work_server
 - Secrets synced to home_nas encrypted
-

- Secrets NEVER stored on control-plane unencrypted
- Environment variables for runtime secrets

Encryption:

- AES-256 for files
- TLS 1.3 for transit
- Encrypted database for sensitive data

RECOVERY ACCESS POLICY

Minimum Access:

- laptop_control MUST have SSH key access to all nodes
- phone_personal MUST have recovery codes
- home_nas MUST have encrypted backup access

Emergency Procedures:

1. Access laptop_control via Tailscale
2. Use SSH to connect to target node
3. Authenticate with 2FA from phone_service
4. Execute recovery from home_nas backup
