

TreeContract

Purpose

This contract defines the tree model for the Balloo platform node structure.

Source of Truth

- **Node definitions:** [packages/core-tree-model](#)
- **Current structure:** Repository directory layout

Node Structure

```
interface Node {  
  id: string;  
  type: 'app' | 'package' | 'contract' | 'doc' | 'tool';  
  name: string;  
  path: string;  
  parent?: string;  
  children?: string[];  
  metadata: {  
    status: 'active' | 'legacy' | 'planned';  
    version?: string;  
    dependencies?: string[];  
  };  
}
```

Tree Structure (Target)

```
balloo-monorepo/  
├── apps/  
│   ├── web-main (messenger) [active]  
│   ├── admin (admin-portal) [active]  
│   ├── api [active]  
│   ├── desktop [planned]  
│   ├── mobile [planned]  
│   ├── android-service [planned]  
│   └── max-server [planned]  
├── packages/  
│   ├── shared [active → legacy]  
│   ├── settings [active → legacy]  
│   └── [core-* packages] [planned → active]  
├── workdocs/  
│   ├── contracts/ [active]  
│   ├── nodes/ [planned]  
│   └── trees/ [planned]
```

```
|— docs-content/ [planned]
|— infra/ [planned]
```

Must Rules

1. **Unique IDs:** Each node **MUST** have a unique id
2. **Path-based:** path defines the location in the repository
3. **Status tracking:** status must be one of: active, legacy, planned
4. **Explicit dependencies:** dependencies between nodes must be declared

Machine-Binding Notes

Future machine-readable binding:

- `packages/core-tree-model` will define the Node type
- `platform-state/manifests/` will contain the current tree state

Version

- **Contract Version:** 1.0.0
- **Last Updated:** 2026-06-09
- **Status:** Active
