

NODE_SUMMARY_home_nas

Canonical Name: home_nas

Aliases: nas, backup-server, storage

1. NODE IDENTITY

- **Canonical Name:** home_nas
 - **Aliases:** nas, backup-server, storage
 - **OS Target:** macOS / Linux (NETATALK/SMB)
 - **Role Class:** backup-node
 - **Criticality:** HIGH (для backup)
 - **Always-On:** SHOULD (для scheduled backups)
-

2. RESPONSIBILITIES

Main Functions:

- MUST хранить backups work_server
- MUST хранить git/artifact mirrors
- MAY хранить media файлы
- MAY выполнять non-critical задачи

Project Bindings:

- **All Projects:** Backup storage

Services Expected:

- SMB/NFS file sharing
 - Backup scripts
 - rsync
 - Optional: Docker (for non-critical tasks)
-

3. BOUNDARIES

MUST NEVER DO:

- MUST NOT быть primary execution node
- MUST NOT выполнять production workload

AUTHORITATIVE FOR:

- Backup storage
 - Archive mirror
-

4. NETWORK & ACCESS

Private Access:

- Tailscale
- Local network (SMB/NFS)

Public Exposure:

- NONE
-

5. DEPLOYMENT ROLE

- **Dev:** MAY (хранилище артефактов)
 - **Stage:** NO
 - **Prod:** NO
 - **Can host production:** NO
-

6. RECOVERY ROLE

- **Recovery Priority:** HIGH
 - **What breaks if absent:** Невозможно восстановить work_server
 - **Recovery Method:** Замена storage node + восстановление из remote backup
-

7-8. SOURCES & RECREATION

- Configure SMB/NFS sharing
 - Set up Tailscale
 - Configure backup sync from work_server
 - Encrypt sensitive data
-
